Introduction

This document describes a configuration for a Cisco IOS® router to connect a network to the Internet via Network Address Translation (NAT) through two ISP connections. The NAT of the Cisco IOS Software can distribute subsequent TCP connections and UDP sessions over multiple network connections, if equal-cost routes to a given destination are available.

The screenshot shows the 'Voice' configuration page for a Linksys phone adapter. The 'System Configuration' section includes fields for 'Restricted Access Domains', 'Enable Web Server' (set to 'yes'), 'Web Server Port' (set to '80'), 'Enable Web Admin Access' (set to 'yes'), and 'Admin Password'. The 'Internet Connection Type' section has 'DHCP' set to 'yes'. The 'Optional Network Configuration' section has 'HostName' and 'Domain' fields. The 'DNS' section has 'Primary DNS' and 'Secondary DNS' both set to '208.67.222.222', 'DNS Server Order' set to 'Manual', 'DNS Query Mode' set to 'Default', 'Syslog Server' set to '1.pool.ntp.org', and 'Primary NTP Server' set to '0.pool.ntp.org'. There are 'Save Settings' and 'Cancel Settings' buttons at the bottom.

```

Changing switch hostname
Switch(config)#hostname SW1

Configuring passwords
SW1(config)#enable secret cisco
SW1(config)#enable password notcisco

Securing console port
SW1(config)#line con 0
SW1(config-line)#password cisco
SW1(config-line)#login

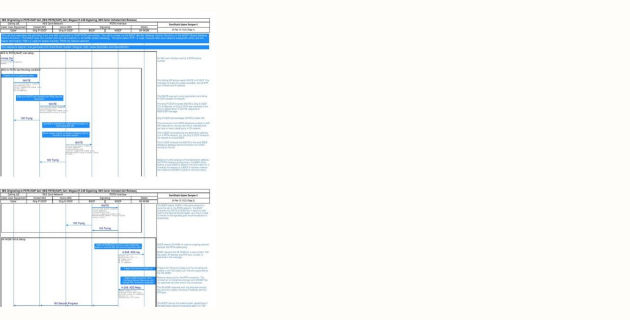

Securing terminal lines
SW1(config)#line vty 0 4
SW1(config-line)#password cisco
SW1(config-line)#login

Encrypting passwords
SW1(config)#service password-encryption

Configuring banners
SW1(config)#banner motd $
-----
UNAUTHORIZED ACCESS IS PROHIBITED
-----
$

Giving the switch an IP address
SW1(config)#interface vlan 1
SW1(config-if)#ip address 172.16.1.11 255.255.255.0 (or dhcp)
SW1(config-if)#shutdown

Setting the default gateway
SW1(config)#ip default-gateway 172.16.1.1
    
```

Sip routing with kamailio pdf. Sip routing with kamailio.

Step 6: Enable the Siremis and Rewrite module After setting up VirtualHost above, enable it by performing the commands under a2ensite siremis sudo. conf sudo a2enmod rewrite sudo systemctl restart apache2. Finally, follow the steps below to allow the Siremis user to access their database. Run these on Ubuntu sudo systemctl stop mariadb. sudo systemctl start mariadb. sudo systemctl enable mariadb. After that, run the commands below to protect the MariaDB server by creating a root password and disabling remote root access. After a short time, the configuration should complete and provides a username and an admin password. Use the credentials to login and start configuring your environment. INFO: UID tables created successfully. To get Siremis installed, you want to install Kamailio. To get Siremis installed, you want to install Kamailio. The import of the default data inserts the records required by the Siremis administration. Now? Install tables for imc cpl siptrace domainpolicy careroute drouting userblacklist httable purple uac pipelimit mtree sca mohqueue rtproxy rtpengine? cd var/www/siremis sudo make up24 sudo make chown Finally, configure the Apache2 site configuration file for Siremis. Then, open the file etc/kamailio/kamailio.cfg by running the commands below: sudo nano etc/kamailio/kamailio.cfg Then add the following rows below #! KAMAILIO. sudo nano etc/apr/sources.list.d/kamailio.list Then copy and paste the rows below into the file and save it. Run the commands below to install. (y/n): y INFO: create extra tables in kamailio . It is based on OpenSER and SER INFO: Extra tables successfully created. sudo apt install php7.2-gmp php7.2-curl php7.2-intl php7.2-mbstring dg-2.7.php dg-2.7.php cprlxml-2.7.php ltni-2.7.php lqsym-2.7.php Php7.2-Sqlite after installing PHP 7.2, run the controls below to open PHP predefined configuration files for apache2. Deb Main bionic Deb-sc Main bionic finally, update the Ubuntu packages and install Kamailio. ATTENTION: SIP DB update is removing and recreating the ACC and Miss Calls tables in the Kamailio database. SUDO MySQL -U Root -P Enter your root password, when necessary. If you are looking for an Open Source Sip Server to perform company VoIP and the presence of communication in real time, you could take a look at Kamailio.

When you see it, Apache2 works as expected. Step 4: Download Kamailio, the latest Kamailio release packages are not available in default Ubuntu repositories. It provides a simple way to create and manage user profiles, routing rules, view the accounting, registered phones and communicate with the SIP server. Step 5: Install and configure Siremis now that Kamailio is installed, you will need a simple web interface to manage the server. To restart Apache2, perform the controls under Sudo Systemctl restart Apache2. Service to test the PHP 7.2 settings with Apache2, create a pppinfo. Php files in the Apache2 root directory by performing the controls under SUDO Nano /var/www/html/pppinfo.php then type the content below and save the file. CD/VAR/www/sudo apt install git sudo git clone after that, change in the siremis folder and prepare your environment. Then perform the SQL declaration below Grant All Privileges on Siremis * A Siremis@Localhost Identified by 'Password'; Then install and configure Siremis and Siremis Backend Portal to manage Kamailio on Ubuntu 18.04 | 16.04 with apache2 http server. server.
